

Raghav Rajaraman

Frontend Engineer — Bangalore, India

+91 6383455639 ✉ raghav.rajaraman@gmail.com <https://www.linkedin.com/in/raghav-rajaraman-724a7a173/>

Summary

Frontend Engineer with 4+ years of experience building scalable, user-centric web applications with React.js, Next.js, and TypeScript. Experienced in frontend architecture, performance optimization, code quality, and delivering business-critical modules for enterprise platforms in the oil & gas and banking domains. Currently mentoring developers and owning end-to-end feature delivery. Actively building with Generative AI technologies including LLMs, RAG pipelines, and agentic workflows.

Education

Vellore Institute of Technology (VIT), Chennai

June 2018 – June 2022

B.Tech, Computer Science and Engineering · Chennai, Tamil Nadu

Experience

Deloitte India

Software Engineer - II

June 2025 – Present

- Develop and maintain a mission-critical enterprise platform in the **oil & gas sector** serving **60M+ users** nationally, one of the largest-scale deployments in the domain.
- Drive end-to-end feature delivery for a critical application module, owning frontend architecture decisions, production stability, and **mentoring 3 developers** on engineering best practices.
- Serve as primary point of contact for production incidents, reducing average resolution time by **20%** through systematic debugging and cross-functional coordination.
- Improved application performance by **20%** by implementing code splitting, lazy loading, and optimized state management across React and Next.js modules.
- Drive code quality initiatives by refactoring modules against **SonarQube** static analysis findings and resolving **ESLint** violations, reducing technical debt and improving long-term maintainability of the codebase.

Software Engineer - I

July 2022 – June 2025

- Helped establish the **foundational UI layer** for a corporate banking platform, contributing reusable component patterns and coding conventions adopted across the team.
- Built 20+ end-to-end screens for a maker-checker (multi-role approval) workflow system, working closely with Business Units and UX designers to deliver intuitive banking interfaces.
- Owned feature development and maintenance for a Personal Finance Management (PFM) app at a leading retail bank, working closely with Business Units to deliver reliable customer-facing modules.
- Acted as a frontend liaison between design, backend, and business teams — translating requirements into technical specs and reducing back-and-forth during delivery.

Projects

Speedle – Web3 Word Guessing Game

- Built a Wordle-inspired decentralized game using Solidity smart contracts and a React.js frontend, enabling players to participate through Web3 wallets.
 - Implemented an ETH-based prize pool system where participants contribute funds and daily rewards are automatically distributed to the fastest correct guesser through smart contracts.
- Deployed and tested the application on the Sepolia testnet, focusing on secure on-chain game logic & transparent reward distribution

AI-Powered Portfolio Assistant

- Built a conversational portfolio assistant using a RAG pipeline that retrieves resume content and returns natural-language answers.
- Implemented an agentic workflow with dynamic tool routing, selecting the appropriate tool based on user query intent.
- Engineered query decomposition and hybrid retrieval (dense + keyword) to improve chunk relevance over baseline vector search.
- Designed a polyglot persistence layer — MongoDB for chat history and conversation state, SQLite for structured relational data.
- Integrated a human-in-the-loop (HIL) approval step enabling users to trigger email sends directly from the chat interface.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Python, Solidity

Frameworks & Libraries: React.js, Next.js, Redux, Redux Toolkit, Context API, Storybook.js

UI & Styling: Sass/SCSS, CSS Modules, Ant Design, Material UI, Responsive Design

Frontend Engineering: Component Architecture, Code Splitting, Lazy Loading, State Management, Performance Optimization, Code Refactoring, Static Code Analysis, Cross-Browser Compatibility, REST API Integration

AI / ML: LLMs, RAG (Retrieval-Augmented Generation), Agentic Workflows, Vector Databases, Hybrid Retrieval

Tools & Platforms: Git, GitHub, SonarQube, ESLint, Azure Cloud, Figma, Postman, Agile/Scrum

Databases: MongoDB, SQLite

Leadership Skills

I consider myself a strong team player who can work effectively with different people and adapt to different working styles. At the workplace, I try to communicate clearly, especially when there are dependencies between frontend, backend, QA, and other teams. I'm comfortable raising concerns when I feel there is a risk to delivery, but I also try to approach those discussions constructively and focus on finding a solution rather than simply pointing out a problem. I believe I have good ownership and accountability toward my work, and I'm willing to support my teammates when they need help, particularly when an issue requires collaboration or debugging across teams.

I also believe I have the potential to lead a frontend team. For me, leadership is not just about assigning tasks; it is about taking ownership, helping team members grow, making technical decisions when required, communicating priorities clearly, and ensuring the team delivers consistently. I'm comfortable taking responsibility for a module and coordinating with other teams, and I would like to grow further into a role where I can mentor developers and contribute to technical and project-level decisions. One of my strengths is that I'm a fast learner. When I come across a new concept, I generally try to understand not just how to use it but also why it works and how it would be implemented in a real-world or production environment. This is something I have applied while learning areas outside my core frontend experience, such as RAG, LangChain, LangGraph, FastAPI, vector databases, and AI-based applications. I'm comfortable asking questions, experimenting, debugging problems, and gradually building a deeper understanding rather than relying only on theoretical knowledge.

I would describe myself as someone who is curious, proactive, and willing to take ownership. I'm comfortable receiving feedback and using it to improve, and I try to stay calm when priorities change or when unexpected issues come up. At the same time, I'm aware that as I move toward a senior or leadership role, I need to continuously improve my delegation, stakeholder communication, and ability to balance technical depth with team and business priorities. Overall, I believe I can contribute not only as an individual frontend developer but also as someone who can gradually take more responsibility for the team, the technical direction, and the overall delivery.
